Highly versatile – the abrasive block SK 500

Customers opting for the abrasive block SK 500 are provided with a versatile abrasive that has **four usable sides**. The product will process

- paint,
- **varnish**,
- filler and
- wood

with exceptional speed and efficiency every time. The main benefit of this abrasive block is immediately apparent: Thanks to its flat and upright design, it has **four usable sides**. This design makes this product exceptionally **flexible** during a large variety of applications. This **abrasive block** is equally popular with professionals and hobby users.

Optimum removal rate – the abrasive block SK 500

Its close coating and aluminium oxide grain are responsible for the outstanding stock removal rate of the **SK 500**. Better yet, this performance remains unchanged no matter if the **abrasive block** is used for work on **varnish**, paints or filler. The qualities of this abrasive truly come to the fore when it is used for fine sanding surfaces. Robust and washable, the material can be reused after every application. This ensures usability over a long period. The fields of application for which this **abrasive block** is an excellent option include the metalworking industry. Another highlight of this product is its competitive price.

Find the abrasive block that is best for your application

Measuring 100 mm in width and 70 mm in length, the **abrasive block SK 500** is available with grits 60, 80, 100, 120 and 180 as well as with grit 220 and 280. The height of the **abrasive block** is 25 mm. These dimensions have proven to be of great value in real-world use as they let the **abrasive block** fit perfectly in the user's hand. The **abrasive block SK 500** performs equally well on level and profiled workpiece surfaces. The **flexible** foam core at the heart of this product makes it suitable for a wide range of applications. The product delivers dependable removal rates - even on the surfaces of workpieces with complex profiles. This abrasive is an equally fine option for dry and wet sanding. This is why professionals and do-it-yourselfers alike rely on the **SK 500**.
